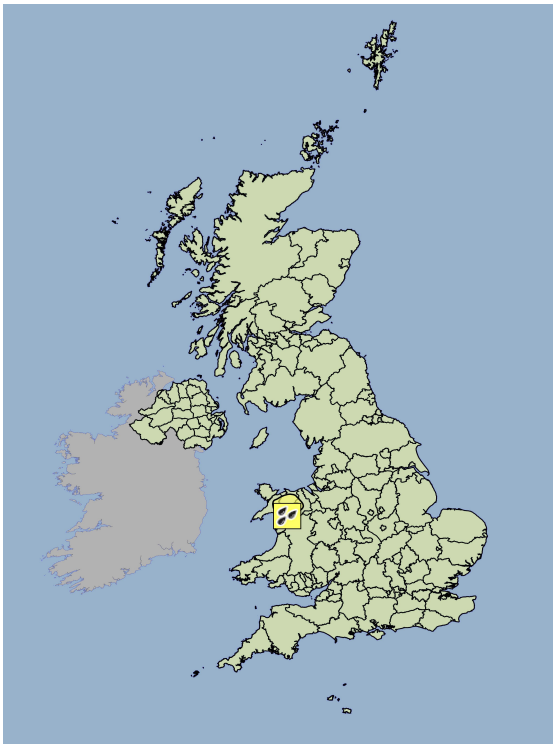
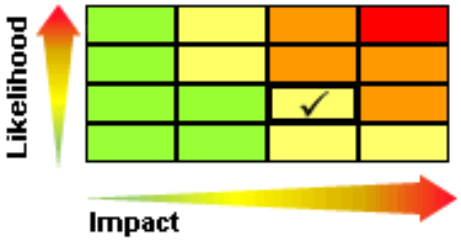
National Severe Weather Warning Service





Chief Forecasters Assessment
A slow-moving frontal system is bringing a lengthy spell of rain and strong winds to parts of Wales. This system is still expected to generate some large rainfall accumulations within the warning area, especially across high ground. 20 to 40 mm could fall quite widely with locally in excess of 125 mm possible across Snowdonia. Given the saturated state of the ground from recent rainfall, this amount of rain could lead to some localised flooding.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **11:30 on Sat, 05th Dec 2015** until **09:00 on Sun, 06th Dec 2015**

Spells of heavy rain are expected until early Sunday. Given saturated ground and high river levels, be aware of the potential for localised flooding and disruption to transport.
